What is Siteonmobile ?

Siteonmobile is a pilot service from HP Labs India that enables SMS and voice access to existing websites.. More than 50% of the mobile phones today are ultra low end, with just voice and text messaging capabilities. Our solution enables these low end phones to access the web without GPRS connectivity on the phones. Furthermore, it is very simple to enable an existing website to be accessed over SMS or voice.

Value of SiteOnMobile

- SiteOnMobile enables a business to increase the reach of their content and services.
- Single click web access over SMS using low-end mobile phones.
- Anytime Anywhere Access to business relevant tasks.
- Create call centers for any business without any capital cost.
- No developer house needed.
- SiteOnMobile helps to rapidly create SMS & Voice interfaces for a personally relevant application on any website.
- No programming skill set required to create new widgets.
- No infrastructure cost for setting up the SMS gateway and voice center (call center).
- Siteonmobile support widgets on Windows mobile, Palm and Android devices.
- Above all, time to market is reduced.

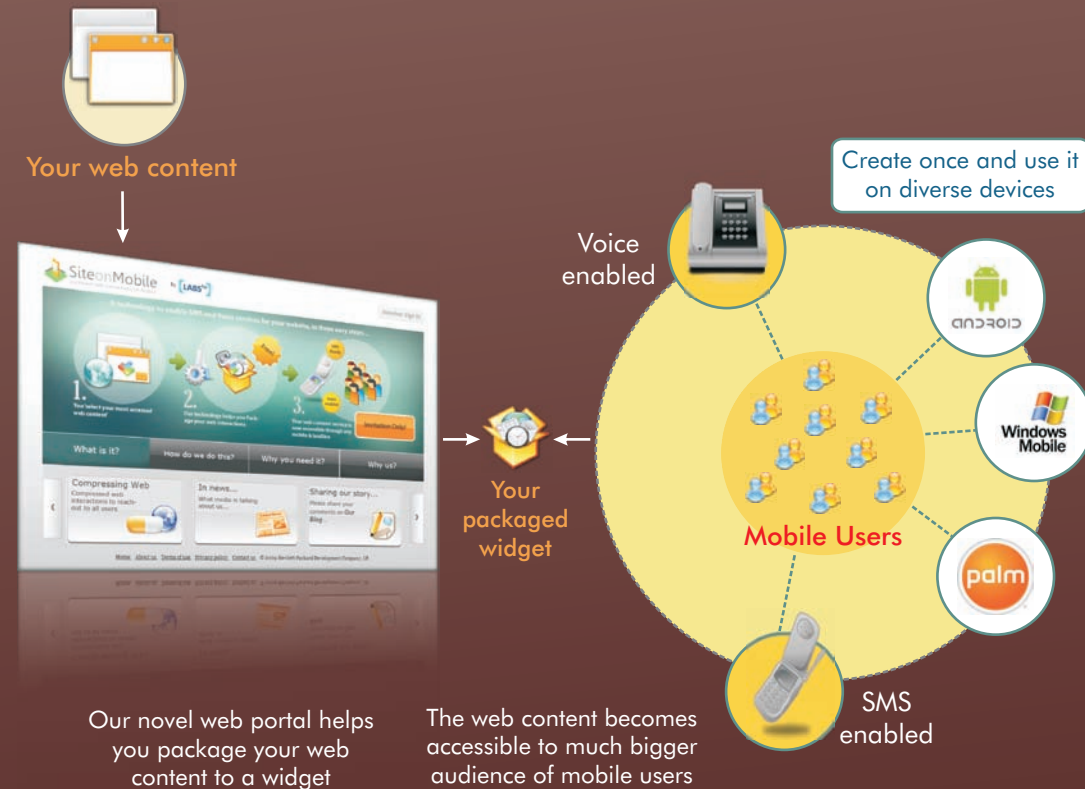

Who should use SiteOnMobile solution

- Website owners interested in enabling their services over SMS or voice
- End consumers interested in accessing specific web content or service using low end mobile phone (voice or SMS).

How can I start using SiteOnMobile

The portal is currently in an “invitation only” mode where only selected customers will be invited to create new services. Interested content owners can send in their request to access the solution on the portal, giving a brief description of their website to siteonmobile@gmail.com.
